**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(d) the invention was first patented or caused to be patented, or was the subject of an inventor's certificate, by the applicant or his legal representatives or assigns in a foreign country prior to the date of the application for patent in this country on an application for patent or inventor's certificate filed more than twelve months before the filing of the application in the United States.

2. Claims 1-30 are rejected under 35 U.S.C. 102(e) as being anticipated by Bradski et al, US 2004/0175020 A1.

3. Claims 1, 11, 19, 29-30, Bradski teaches an apparatus for autonomic power adjustment in an electronic device [*title*], comprising:

a collector configured to collect indicia of a user's body position in relation to an electronic device for a user who maintains close proximity to the electronic device [*image capturing device 315 of fig. 2A*];

a determination module configured to determine a power state for the electronic device based on the indicia [*steps 515 and 520 of Fig. 5*]; and

a power control module configured to selectively adjust power supplied to subsystems of the electronic device to transition to the determined power state [*power management logic 265 of Fig. 2B*].

4. Claims 2, 12, 20, Bradski teaches the indicia are representative of one of a plurality of anatomical states associated with different user body positions [*Fig. 3, para 0029*].

5. Claims 3, 13, 21, Bradski teaches the power state is representative of one of a plurality of hierarchical power states [*para 0025, lines 9-16*].

6. Claims 4-5, 14, 22-23, Bradski teaches the determination module is further configured to select a lowest power state in response to the indicia [*para 0025, lines 9-16*].
7. Claims 6, 15-16, 24, Bradski teaches the determination module is further configured to measure a time interval that a user maintains a body position and select the power state such that the time interval exceeds a latency period associated with the selected power state [*Steps 615, 620 and 625 of Fig. 6, para 0046*].
8. Claims 7, 17, 25, Bradski teaches the user's body position comprises focusing an eye on a display coupled to the electronic device to study the display [*Fig 4D, para 0038*].
9. Claims 8, 18, 26, Bradski teaches the collector is further configured to capture a series of images of the user in proximity to the electronic device, identify control points in the images, and determine indicia of a user's body position based on the control points [*see face tracking, para 0033-0038*].
10. Claims 9, 27, Bradski teaches the collector is further configured to poll a plurality of sensors configured to detect characteristics of the user's body position [*image capturing device 315 of fig. 2A*].
11. Claims 10, 28, Bradski teaches the collector is further configured to receive signals from sensors that continuously monitor characteristics of a user's body position [*para 0023, see also Fig. 3*].
